

# The New Standard for Consenting

An IRB-integrated eConsent process that activates studies in days instead of weeks.

## Improve Accuracy

Get consent documentation right the first time. Every time. Never worry about versioning, re-consenting, or missed signature lines with state-of-the-art version control and compliance alerts.

## Start Research Faster

Accelerate study startup. Use your forms and your processes. Speed through consent form amendments with easy version control using the only IRB-integrated eConsent solution.

## Ensure Compliance and Security

Q Consent meets or exceeds stringent privacy and security requirements, including FDA 21 CFR Part 11, HIPAA, and HITECH. Plus, it's the only eConsent solution that is compliant with COPPA and PIPEDA.

## Track Metrics and Monitor Remotely

Dashboards and remote monitoring save trips to sites. Conveniently manage version control, monitoring, metadata, recruitment, and more, remotely. Centralize electronic and wet ink signatures and gain immediate access to consent documentation.

### 3 Reasons CROs Advocate for Q Consent

- **Removes hurdles** – Eliminate paper cuts with electronic documentation, and enrollment monitoring, allowing studies to start up quickly.
- **Improves communication** – This cloud-based solution allows sites to communicate easily with the sponsor and participants through proprietary features and tools.
- **Reduces errors** – Version control and error locks mean less time spent on auditing and corrective action.

### 3 Reasons Sites Love Q Consent

- **Shortens study timelines** – With real-time enrollment validation, sites can receive payment and start study procedures faster.
- **Enables IRB integration** – Sites benefit from similar forms and processes used in a whole new way.
- **Enhances the consent discussion** – Participants can see consent forms in advance and ask questions before their first visit.
