

Institutional Biosafety Committee

Your trusted partner for institutional biosafety committee (IBC) review and administration

We understand that service and performance matter. When your human subject research involves gene transfer, certain types of immunotherapy, or other use of recombinant or synthetic DNA, you need a trusted partner to seamlessly deliver IRB and IBC services.

Flexible IBC Administration

The Quorum IBC administration team adapts to your needs. With decades of experience establishing and administering IBCs, our expert team is here for your research.

Simply request IBC administration during protocol submission and our team will work with sites to handle the rest.

Setup and Registration

We identify, provide, and select members, conduct site assessments, and file necessary paperwork on your behalf.

Administration and Record Keeping

Quorum will administer your IBC, from reviews through record retention. We handle your IBC operations efficiently, **with the precision and compliance you would expect** from the most preferred central IRB.

Communication

We understand each site is different, so we ensure open communication with all sites to meet their needs. Plus, we are happy to work as part of larger IRB and IBC systems.

Already using another IBC administrator?

Quorum will help you negotiate flexible vendor options, and we will never lock you into a restrictive contract—we want you to choose us for our service, not because you have to.

Seamless Review Backed by One-Touch Collaboration™

Your research benefits from integrated and seamless reviews, with a single point of contact. **No switching between systems** to access approval. **No need to call separate representatives** to find out the status of your review.

Coordinated Review

One contact, one protocol, one integrated stream of communications for studies requiring both IRB and IBC review.
